# 2<sup>nd</sup> Quarter 2016 Fixed Income Market Commentary

June 30, 2016

- Treasuries rallied this quarter on the heels of the UK's European Union referendum and the lowering of economic forecasts by the Federal Open Market Committee. The UK's vote to leave the EU was generally considered a surprise by many and left investors wondering about the future health and direction of the European economy.
- In the U.S., the Federal Open Market Committee reduced their projections for GDP growth and the level of the fed funds rate in future years, which caused rates to generally decline across the curve.
- The 10-year treasury yield declined 29 basis points to end the quarter at 1.49%. The 2-year yield decreased 14 basis points to 0.59% while the yield of the 30-year treasury fell 31 basis points to 2.31%. These moves caused the 2-30 year yield spread to flatten to 172 basis points.
- With the decline in rates, the performance of the bond market was strong once again this quarter with a return on the Barclays Capital Aggregate Index of 2.21% and a return on the Barclays Capital Intermediate Government Credit Index of 1.59%.
- Spread product was in favor this quarter as all four spread sectors delivered positive excess return. The corporate sector and asset-backed securities sector were the best performers with 99 basis points and 50 basis points of excess return, respectively. The agency sector and the mortgage-backed securities sector followed with excess returns of 36 basis points and 3 basis points, respectively. Thus, the Barclays Capital Aggregate Index had an excess return this quarter of 31 basis points.
- With the significant decline in rates, we shortened our duration at the end of the quarter and moved to a roughly neutral duration with the benchmark index. In the near term, we expect short-to-intermediate term rates to rise leading to a flatter yield curve.
