Quarterly Commentary

After shrugging off global political turmoil, tensions and sluggish economic growth here and abroad for the first part of the year, the US equity markets began to get choppy in the Third Quarter. The VIX, one of the more commonly used volatility measurements, showed signs of life after being dormant most of the year. Small Cap stocks, as represented by the Russell 2000 Index, had already worked to come back from a two-month, 10% slide from early March to mid-May, while many of the Larger Cap indices, such as the S&P 500, continued to break all-time highs. The Third Quarter saw some of the same with larger cap stocks gently piercing the ceiling of higher highs while Small Cap stocks began a downward trajectory that would result in another 10% plus correction from early July to early October.

In the past 20 years, the largest variance in a calendar quarter between US larger cap stocks (represented by the Russell 1000) and smaller cap stocks (represented by the Russell 2000) occurred during the infamous Long-Term Capital episode in the Third Quarter of 1998. Throw in another spread gap two quarters later and you have the two widest spreads between Large Cap and Small Cap stocks in 20 years, 984 bps and 954 bps, respectively. Fast forward more than 15 years and we now have the third largest spread with 801 bps in the Third Quarter of 2014. Last quarter even handily beats the spread during the Small Cap bear market of Third Quarter 2011 (Russell 2000 declined almost 22%, but the underperformance spread to the Russell 1000 was only 719 bps). As Large Cap investors can count their basis points earned last quarter, 112 bps for the S&P 500 or 65 bps for the Russell 1000, SMID cap investors must nurse their wounds on a minus 5.35% or minus 6.40% return for the Russell 2500 or 2500 Value, respectively.

Specific to the GW Capital portfolio, we were disappointed to underperform both the Russell 2500 and Russell 2500 Value last quarter. This was especially true given that our portfolio features an average-weighted market capitalization more than 50% above those benchmarks. Nonetheless, the underperformance resulted from detractions in Sector Allocation and Issue Selection, with Issue Selection holding a little more of the blame.

Starting with Sector Allocation, one area of detraction depends on the benchmark used. Against the Core Russell 2500, our underweight to Healthcare detracted. Against the Russell 2500 Value, the detraction came from our underweight to Financials. Our largest detraction on against both indices came from the portfolio's overweight to the underperforming Energy sector. There wasn't much meaningful positive contribution from other areas of Sector Allocation. On the plus side, there wasn't much egregious detraction either.

While the portfolio did not go unscathed from its Sector Allocation, most of the damage occurred within Issue Selection. Recognizing that the quarter was a bad one overall for smaller cap stocks, GW Capital's picks didn't help our cause. On an index relative basis, of particular duress were our holdings in Financials, Consumer Discretionary and Materials. In aggregate, the stocks held in each of those sectors had negative double digit returns. As might be expected, our worst performing stock came from the Consumer Discretionary area. Among the total portfolio, we had fourteen stocks fall more than 10% during the quarter. This included a couple that declined more than 30%. We had only eight stocks generate a positive return in the third quarter with only one of those in the double digits. The best performing stock was in the Industrials sector.

On the transactions front, we bought three new stocks and didn't sell any outright. However, we did see plenty of activity in trimming holdings as five stocks were pared back during the quarter (one of which is marked for near-term full sale). We added to one existing position.

Quarterly Commentary

We remain entrenched to our economic outlook of Two steps forward – One and a half steps back. Our economic eye continues to be wary of China, with economic reports there remaining mixed and the country still in a longer-term, downward trend. We were somewhat taken aback by the reversal of the uptrend/stabilization we had been seeing in Europe. Some of the companies who had been discussing improvement were changing tune and pitching caution and pessimism. Geopolitical risks and easing rates and monetary policy in Europe and Japan have provided a tailwind for the US Dollar. We've seen an uptick in volatility measures for the US equity markets. Overall, the economy continues to be resilient. After 1st Quarter GDP reports bounced around from lower/lower to higher/lower and finally settled at negative 2.1%, we saw a big upward bounce in the 2nd Quarter that kept being revised higher, with 4.6 percent growth the latest report. With Small Cap stocks down for the quarter, it makes sense that we also saw corporate bond spreads widen by a decent amount, especially in High Yield. Although they remain below long-term historical averages, these spreads have definitely ricocheted off the bottom. While low yields and tight spreads generally bode well for the stock market, we have seen in the past how quickly those winds can shift and, when they do, smaller cap companies usually feel that pain first. Third Quarter 2014 was no exception.

GW Capital, Inc. is an investment adviser registered under the Investment Advisers Act of 1940. However, this registration does not imply a certain level of skill or training. Portfolio holdings percentages mentioned herein are for either a composite or a representative account of applicable composite managed by GW Capital. The representative accounts used herein may or may not be the same account. Our views expressed herein are subject to change and should not be construed as a recommendation or offer to buy or sell any security or invest in any sector, and are not designed or intended as basis or determination for making any investment decision for any security or sector. Our discussions should not be construed as an indication that an investment in a security has been or will be profitable, or that the investment recommendations or decisions we make in the future will be profitable or will equal the investment performance of any security discussed herein. Any holdings discussed herein do not represent an account's entire portfolio, and represent only a small percentage of, or may not be included in, any account's portfolio holdings. There is no guarantee that the objectives stated herein will be achieved. Graphs, charts, and/or diagrams cannot, by themselves, be used to make investment decisions. For a complete list of GW Capital's past specific recommendations holdings report for the composite for the last year as of the current quarter end, and current holdings for the Composite as of the current quarter end, please contact Jennifer Wheat at (425) 455-4551. Although the statements of fact and data in this report have been obtained from, and are based upon, sources that the firm believes to be reliable, we do not guarantee their accuracy, and any such information may be incomplete or condensed. Past performance is not a guarantee of future results. Investing in stocks entails the risks of market volatility. The value of all types of stocks may increase or decrease over varying time periods. Small-capitalization companies may lack the financial resources, product diversification and competitive strengths of larger companies. In addition, the securities of small-capitalization companies may not trade as readily as, and be subject to higher volatility than, those of larger, more established companies. Portfolios that invest a large percentage of assets in only one industry sector (or in only a few sectors) are more vulnerable to price fluctuation than portfolios that diversify among a broad range of sectors. Investors cannot invest directly in an index. The performance of unmanaged indexes reflects no deductions for fees, expenses or taxes which would affect performance of actively managed assets.
