

## City of Ormond Beach Police Officers Pension - International Equity ADR Portfolio

International equity markets fell for the second consecutive quarter in U.S. dollar terms, marking the weakest six-month start to a year since 2010. The culprits leading to the decline in equity prices ranged from tariffs to foreign exchange fluctuations, and investors appear to give little chance of any short-term resolutions to this growing list of headaches. Our benchmark MSCI ACWI ex US fell 2.5%, with Emerging markets experiencing the worst of the declines, as the MSCI Emerging Market Index sank 7.8% compared to the developed market MSCI EAFE's drop of 1.1%. Only 11 of the 46 country indices within our benchmark gained for the quarter, although in local currency terms 24 country indices were positive, highlighting the impact that weaker foreign currencies had on returns for dollar-denominated investors this quarter.

In times of uncertainty, investors have traditionally favored the safe haven of U.S. currency. The U.S. dollar faces its own headwinds with a growing fiscal deficit in light of the large tax cuts implemented last year, but investors tend to be more short-term oriented and are focusing on protecting current assets. The U.S. Dollar Index gained 5.0% for the quarter, reversing weakness from the first three months of the year (Chart 1). All major currencies

fell relative to the dollar, in particular emerging market currencies such as the Turkish lira (-13.5%) and the Brazilian real (-13.6%).

The increasing likelihood of a global trade war over tariffs played a major role in the market's mood during the quarter. Trade tensions remained elevated, with the Trump administration exchanging barbs with Chinese officials over issues within the technology, steel and agriculture industries. In addition to heightened rhetoric with China,

President Trump has now drawn a line in the sand with Germany over its automobile industry and Canada and Mexico regarding the North America Free Trade Agreement (NAFTA). While we continue to remain optimistic that a global trade war can be averted, the antagonistic approach towards our allies gives us pause. Europe is most exposed to tariffs with 27% of their Gross Domestic Product (GDP) export related (Chart 2), while Chinese exports account for less than 20% of their GDP.

<sup>(3)</sup>Renaissance primary benchmark.

Until a formal resolution on trade issues is reached, we expect to see continued volatility in capital markets.

National elections took center stage in a number of countries including Turkey and Mexico. President Erdogan won elections in June and further strengthened his grip on the Turkish economy. In response to his comments regarding the need for lower interest rates, the Turkish lira has declined rapidly against most major

currencies this year as investors worry about the independence of the central bank. This has caused further pain to a fragile economy as Turkey historically borrows funds on a short-term basis. Mexico elected Andres Manuel López Obrador as its new president. The leftist president favors raising the labor standards for Mexican workers, an act that may help in the current NAFTA negotiations with the U.S. and Canada. In Europe, German

Chancellor Angela Merkel is working to keep her fragile coalition together as debate rages over European Union immigration policies. In Italy, the Five Star Movement and the League agreed to form a coalition, marking the first fully populist government in Europe. With this new government, investors grew concerned the political players would push for Italy to exit the European Union, which led to weakness in Italian securities.

Data from 3/31/13–3/31/18  
Source: FactSet, EIA Short-Term Energy Outlook, June 2018

**CHART 4: Purchasing Managers Indices (PMIs)<sup>(1)</sup> Soften**

Data from 7/31/15–5/31/18  
<sup>(1)</sup>The Purchasing Managers Index (PMI) is an indicator of economic health for manufacturing and service sectors. The purpose of the PMI is to provide information about current business conditions to company decision makers, analysts and purchasing managers. Composite PMIs are calculated by taking the weighted average of the manufacturing and services PMI indices for each country, using relative weights based on gross value added data provided by the national statistical institute in each country. An index reading of 50.0 signals no change since the previous month. Above 50.0 signals an increase (or improvement), below 50.0 a decrease (or deterioration). The greater the divergence from 50.0, the greater the rate of change signaled.  
Source: FactSet, IHS Markit

Crude oil prices rose further during the quarter, ending above \$74 per barrel (West Texas Intermediate). The rise in oil prices has been a result of strong demand from a global economic recovery, combined with supply constraints imposed by OPEC (Chart 3). In June, OPEC agreed to increase production by 1 million barrels per day, but this additional supply may only serve to offset declining production in countries such as Venezuela, Iran and Angola, resulting in oil prices staying firm.

While the global economy is still relatively strong, recent economic data shows that growth may be peaking. After two years of steady increases, Purchasing Managers Indices (Chart 4) have started to plateau. In particular, manufacturing indices have been trending lower since the beginning of the year. While this is just one set of economic statistics, it may indicate that the tariff turmoil and rising geopolitical risks are dampening growth prospects and leading to a so-called “risk-off” environment. As this relates to equity markets, investors tend to favor growth stocks over value stocks in periods where economic strength is waning. Whether looking at U.S, foreign, large cap or small cap markets, growth indices have performed better than value indices year-to-date.

Along with global economic growth, investors focus on company level earnings to gauge prospects for future performance. The recent tax cuts in the

U.S. have boosted the bottom line for many U.S.-based companies. However, foreign firms are also witnessing an increase in earnings following the bottoming of profits in mid-2015 (Chart 5). Based on estimates provided by Bloomberg, earnings per share for the companies in the MSCI ACWI ex US are expected to rise from \$18.90 in 2017 to \$21.38 in 2018. In addition to positive earnings growth, valuation plays an important part in the analysis of equity markets. Foreign markets performed well in 2017 compared to U.S. equity markets, but valuation still favors non-U.S. markets as shown in Chart 6. While many other factors such as foreign exchange and geopolitical risk play into the attractiveness of any asset, the better valuations of foreign markets, in particular emerging markets, provide a good starting point for analysis and help explain why our International Equity strategy maintains a meaningful exposure to emerging markets.

Strategy returns for the quarter trailed our benchmark with most of the relative underperformance occurring in late June as global trade tensions increased. Weakness for the quarter was broad based as only two sectors in our benchmark, Energy and Health Care, had positive returns for the quarter. One of our strategy's best contributing sectors was Energy, where our positive stock selection was offset by our underweight to the sector. We also had favorable results in Health Care, led by Irish contract research firm **ICON** (ICLR, +12.2%). Consumer Discretionary and Financials detracted the most from returns. European jewelry maker **Pandora** (PANDY, -34.8%) slid after the company warned of slowing sales in China. Within Financials, our banking industry exposure in emerging market countries, including China, South Korea and Thailand, detracted the most from returns.

Our stock selection within countries was negative for both developed markets and emerging markets. Japan and France detracted the most from absolute returns, although we did have a positive allocation effect from being overweight in France, while Ireland and Finland contributed the most to performance. As with our benchmark, our emerging market positions performed worse than our developed

market positions, with our Taiwanese semiconductor industry holdings leading to Taiwan detracting the most from our emerging market returns. Peru was our lone emerging market country with a positive return. We remain constructive on emerging markets despite recent weakness. As active managers, we seek out the best opportunities among the 24 emerging market countries in our benchmark.

Currently the largest opportunity set in emerging markets is China, a contrast from 10 years ago when Brazil was the largest weight in the index (Chart 7).

Looking at the latter half of 2018, many of the same forces that have buffeted markets look set to continue. The Trump trade war is having a negative

effect on many parts of world, and uncertainty about the willingness of the U.S. to modify or even do away with longstanding commitments to NAFTA and even the World Trade Organization (WTO) may lead to further uneasiness. Retaliatory trade measures by Europe, Canada and China could put further pressure on asset prices, but

a resolution to the crisis would provide a firm footing for the equity markets as fundamentals and valuations remain attractive. With the exception of the U.S. Federal Reserve, most banks remain in an accommodative stance, providing their economies with ready liquidity to maintain economic growth.

<sup>(1)</sup> The Thomson Reuters ESG Combined score is the ESG Score discounted for significant ESG controversies impacting the company. The ESG Score is the overall company score based on the reported information in environmental, social, and corporate governance pillars. The ESG Controversies Score measures a company's exposure to environmental, social, and governance controversies and negative events reflected in global media.

<sup>(2)</sup> The percentile rank of the company's ESG score in ascending order when compared to the iShares ACWI ex USA Index ETF, according to the company's GICS industry code classification.
