

City of Ormond Beach Police Officers Pension - International Equity ADR Portfolio

International equities ended the quarter marginally higher as negative trade headlines between the United States and China were offset by more positive trade developments elsewhere. The developed market MSCI EAFE Index outperformed the MSCI Emerging Markets Index for the second consecutive quarter as investors grew increasingly concerned about the impact that a trade war could have on Chinese economic growth.

Trade tensions between China and the United States continued to ratchet higher during the quarter as rhetoric turned into action. The United States imposed tariffs on a total of \$250 billion worth of goods imported from China, while the Chinese retaliated by imposing tariffs on \$110 billion worth of goods imported from the United States. Any hopes of a near-term resolution were crushed when the scheduled negotiations between the two countries were cancelled after the United States imposed \$200 billion of tariffs late in the quarter. While China has now put tariffs on over 80% of goods imported from the United States, the United States still has additional firepower with President Trump threatening to place tariffs on an additional \$267 billion of imports from China, which would effectively

cover all Chinese goods imported into the United States (CHART 1). As the trade imbalance appears to favor the United States in a tit-for-tat trade war, China has looked towards other methods to retaliate, including delaying approval of mergers and lowering tariffs on imports from countries other than the United States. Trade headlines aside from China were more positive as the United States, Canada and Mexico came to an agreement on a revamped NAFTA, which will now be called the United States-Mexico-Canada Agreement (USMCA). The United States is also moving forward on talks with the European Union and Japan and completed a revised free-trade agreement with South Korea, all positives on the trade front.

Trade talks have dominated headlines of late, but risks surrounding Brexit are increasing with negotiations not gaining much traction as we inch closer to March 29, 2019, the day that the United Kingdom (U.K.) will officially leave the European Union (E.U.). The British Prime Minister, Theresa May, has been put in an unenviable position as some members of her Conservative Party push her to take a tough negotiating stance against the E.U. However, the Chequers plan that May put forth, which was criticized as being too “soft” by some members of her party, was rejected by the E.U. as it would allow the U.K. to pick and choose which E.U. rules it wants to follow. With the two sides unwilling to find a middle ground, and a tough

decision to be made on the Northern Ireland border, it is hard to envision a deal getting done before the Brexit deadline. As negotiations appear to be stalled, the main opposition party in the U.K. has begun to consider making a push for a second referendum

on Brexit. A revote would be a positive scenario as it is possible that voters would now vote to remain in the E.U., while a no-deal Brexit situation would do significant harm to the U.K., as it is very dependent on trade with the E.U. (CHART 2).

Japanese stocks saw gains during the quarter as Prime Minister Shinzo Abe won his reelection bid. He will now remain prime minister until 2021, which would make him the longest serving prime minister in the history of Japan. This political stability should allow Abe to continue with his easy-money Abenomics policies, which have helped boost the economy. Abe has also pushed for improved corporate governance, which has led to higher shareholder returns through increased dividends and share buybacks. We expect Japanese companies to become increasingly attractive to foreign investors as higher levels of profitability (CHART 3) allow shareholder returns to continue to grow.

Many emerging market currencies have witnessed bouts of volatility during the year (CHART 4). The Argentine peso continued its free fall that began earlier in the year due to worries over the fiscal deficit in Argentina. In order to combat their depreciating currency, the Central Bank of Argentina lifted its key interest rate from 45% to 60%. However, this did little to stop its plunge as the Argentine peso ended the quarter down 29% against the dollar and now has fallen over 50% against the dollar during 2018. Already reeling from fears that the Central Bank of Turkey had lost its independence due to President Erdogan's heavy hand in the economy, the standoff between Turkey and the United States over the detainment of a United States pastor and subsequent sanctions of two top Turkish officials put further pressure on the economy. This negativity caused a sell-off in the Turkish stock market and the Turkish lira, which fell 24% against the dollar during the quarter and has now fallen 37% against the dollar during 2018. While we have no holdings in either Turkey or Argentina and the contagion to other emerging markets has been limited, we are keeping a close

eye on the global impact of these crises. The Chinese yuan has also depreciated against the dollar during the year as slower economic growth and heightened trade tensions have caused investors to move money out of China. However, there is a silver lining for China as the weakened currency should help the global competitiveness of its exports and help to stimulate its economy.

Energy was one of the top-performing sectors during the quarter as oil prices rebounded to levels not seen since 2014 (CHART 5). We have increased our exposure to the energy sector over the past year, as we believe supply growth will be limited by the OPEC production cuts, years of underinvestment in Venezuelan oil assets and geopolitical issues in countries such as Libya. The recent period of low oil prices forced oil companies to improve efficiencies, leading to lower operating costs for many of these companies. The rising price of oil along with lower operating expenses should lead to significantly higher profits for oil companies.

International equities are currently trading at attractive relative valuations when compared to United States equities (CHART 6). Supporting the case for owning international equities is the fact that the United States is in the

midst of a monetary tightening phase with rising interest rates that could begin to negatively impact growth in 2019. Contrary to the United States, many other central banks are expected to maintain an accommodative monetary policy for the foreseeable future. The Bank of Japan expects to continue

its ultra-loose monetary policy indefinitely as it struggles to meet inflation targets. The European Central Bank is winding down its asset purchases (CHART 7), but interest rate increases are not expected until the end of 2019 at the earliest. This accommodative monetary policy should continue

to provide a tailwind to many international economies.

The portfolio ended the quarter with positive absolute and relative returns. Stock selection within emerging markets was positive as shares of Chinese exploration and production company **CNOOC** (CEO, +18%) were helped by rising oil prices. This was partially offset by negative selection in Hong Kong as shares of **WH Group** (WHGLY, -13%) were hurt by tariffs and falling hog prices. Stock selection within developed markets was negative as the Canadian firm **The Stars Group** (TSG, -31%) saw shares fall as investors worried about regulatory changes. This was partially offset by positive stock selection in France, where global reinsurer **SCOR** (SCRYY, +25%) rejected an attempted takeover bid by its largest shareholder. Our underweight to emerging markets helped contribute to a positive allocation effect as they

CHART 8: Emerging Markets Valuation Higher Than Average Relative to Developed Markets

underperformed developed markets. We currently do not believe that valuations for emerging markets are attractive enough (CHART 8) to warrant an increased weighting due to heightened risk levels.

While investors focus on the deteriorating relationship between the United States and China, other risks,

including the potential for a “hard” Brexit, could cause volatility in markets as we close out 2018. However, continued monetary easing and attractive valuations should help to support international equities. As an active manager, we will continue to monitor the portfolio for risks while identifying growing companies trading at attractive valuations.

⁽¹⁾ The Thomson Reuters ESG Combined score is the ESG Score discounted for significant ESG controversies impacting the company. The ESG Score is the overall company score based on the reported information in environmental, social, and corporate governance pillars. The ESG Controversies Score measures a company's exposure to environmental, social, and governance controversies and negative events reflected in global media.

⁽²⁾ The percentile rank of the company's ESG score in ascending order when compared to the iShares ACWI ex USA Index ETF, according to the company's GICS industry code classification.
